

```
class User
{
    private $storage;

    public function __construct()
    {
        $this->storage = new SessionStorage();
    }

    public function setLanguage(string $lang)
    {
        $this->storage->set('lang', $lang);
    }

    public function getLanguage():? string
    {
        return $this->storage->get('lang');
    }
}

$user = new User();
```

```
class User
{
    private $storage;

    public function __construct()
    {
        $this->storage = new SessionStorage();
    }

    public function setLanguage(string $lang)
    {
        $this->storage->set('lang', $lang);
    }

    public function getLanguage():? string
    {
        return $this->storage->get('lang');
    }
}
```

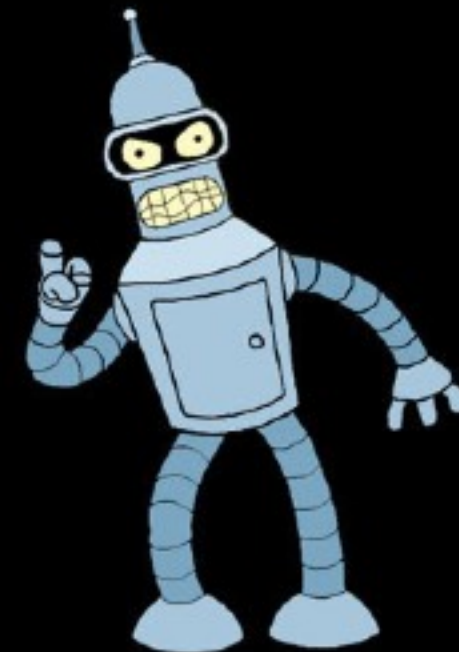

```
$user = new User();
```
